## Google Таблицы

Друзья, подписчик нашего канала создал Таблицу для учета своих активов и написал про это статью.

Вводная от меня. Основа его Таблицы — функция IMPORTXML, она позволяет вытаскивать почти любую строку из веб-страницы, вам нужно только научиться писать xpath запрос.

Таким образом вы всегда сможете собирать нужные вам котировки и другую информацию без скриптов / интеграции с АПИ.

Кстати, скриптами это делать даже сложнее — чтобы обычный parsexml из скрипта проглотил сайт, html нужно сначала обработать, экранировать экранируемое, с тегами порядок навести, с кавычками, etc.

Так что разбирайтесь, как писать xpath и пользуйтесь этой мощной функцией.
